ReactJS –Hooks Assignment

Problem Statement:

You work in XYZ Company as a Front End Developer. The company officials want you to build a web application using react

Tasks to be performed:

1. Create an HTML page with basic HTML skeleton

2. Add React, ReactDOM and Babel.

3. Add script tag with babel jsx code in it

4. Create a useDocument Title Hook which allows users to set the title of the document.

5. Create a state variable name it title and set to document title using useDocument Title hook which you just created.

6. Use input to set the title state variable which in turn sets the title
