Module 4: Assignment

Problem Statement:

You work in XYZ Company as a Front End Developer. The company officials want you to build a form using react

Tasks to be performed:

1. Create an HTML page with basic HTML skeleton

2. Add React, ReactDOM and Babel.

3. Add script tag with babel jsx code in it

4. Create a form that takes username, password, email and mobile number

5. Validate all of these

6. If there is an error display them

7. If not log the data submitted to the console
